

1. First, locate the rod holders on the bow and(or) aft of the boat that you would like to use. Take a measurement from the port side to the starboard side.

2. Second, measure the width of the T-Top in the rear if you plan to use the aft configuration. Take the same measurement in the front if you plan to use it on the bow too or if your shade is only for the bow of the boat.

3. Third, measure the distance from the front and(or) rear of the T-Top to the rod holders that you choose to use.

* The measurements you take depends on how you plan to use your shade kit. If you plan to just use it on either just the bow or just the aft we only need that set of measurements. If you'd like your shade to work on both the bow and aft then we will need both sets of measurements.

_____ Bow Measurement 1	_____ Aft Measurement 1
_____ Bow Measurement 2	_____ Aft Measurement 2
_____ Bow Measurement 3	_____ Aft Measurement 3
